

icomasoft[®] VI PowerScripter Professional v1.1

Description

icomasoft[®] VI PowerScripter is the first and absolutely unique VMware VI Client plug-in for a tight integration of user-defined PowerShell scripts into the object repository of VMware Virtual Infrastructure 3.5. This software delivers predefined functions for common admin tasks and is capable of handling hundreds of custom scripts for direct usage from a dynamically generated context menu within VI Client (for connections to VirtualCenter, ESX 3.5 or ESX 3i). Thanks to its absolute flexibility, this powerful software is a “must” for professional users looking to administrate the virtual infrastructure in compliance with business-aligned functions in a simple and yet most effective manner.

Features & Functions

- Integrated Scheduler for task automation in VMware
- Script management and scheduling wizard
- Native VirtualCenter scheduled task functions
- Seamless integration in VMware
- “Inherited” authentication and permissions
- Seamless integration of PowerGUI
- SSH CmdLet for file copy and command execution on SSH Servers, such as VMware ESX, Linux, Solaris, Network and Storage Systems
- Execution of PowerShell scripts or VI PowerScripter functions through dynamically created context menu
- Execution of VM or host -based PowerShell scripts
- Enhancement of VI Client and VirtualCenter functionality
- Runs local scripts and scripts from network shares
- Activity log files
- Includes icomasoft[®] script templates for the most common VI management tasks, such as “setup and delete virtual switches and port groups”, “change of root passwords on ESX hosts”, “restart of host-based VirtualCenter agents”, “disconnect removable medias”, “View/Search ESX Log files”, various statistics and Top10 views, and many more
- Based on Microsoft’s de-facto standard “PowerShell”

User Benefits

- icomasoft[®] VI PowerScripter provides users with an unprecedented ease-of-use and simplification of many administrative tasks around VMware VirtualCenter, ESX and ESXi.
- Up to 2 hours per day time-savings due to scheduling and automation of admin tasks
- High security level, due to “inherited” authentications and permissions (no separate login required)
- Integrated wizard helps managing scripts and schedules
- Foundation for accurate billing and compliance
- Simplified monitoring and analysis
- Integration of custom functions into VMware’s standard management console
- Standard templates for most common management tasks
- Integration of existing scripts
- Automate or control VMware Consolidated Backup
- Mass and individual configuration with one script
- No training required for PowerScripter (looks and feels like standard VMware management)
- Custom-made scripts based upon your specification can be ordered from icomasoft[®] (sales@icomasoft.com)

Licensing

Perpetual licenses, per seat (per administrator)

Supportet Platforms

VMware ESX 3.5, VMware ESXi 3.5, VMware VirtualCenter 2.5

Prerequisites

Microsoft .NET Framework 2.0, Microsoft PowerShell
VMware VI Toolkit for Windows
