

icomasoft® VI PowerScripter FT v1.6

Description

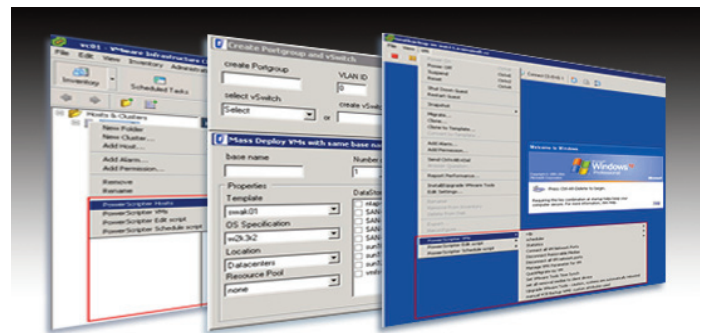

icomasoft® VI PowerScripter FT v1.6 (Fujitsu Edition) is the first and absolutely unique VMware VI/vSphere Client plug-in for a tight integration of user-defined PowerShell scripts into the object repository of VMware Virtual Infrastructure 3.5 or vSphere 4.0 and Fujitsu's ServerView management platform. This software delivers predefined functions for common admin tasks and is capable of handling hundreds of custom scripts for direct usage from a dynamically generated context menu within VI Client or vSphere client. Thanks to its absolute flexibility, this powerful software is a "must" for professional users looking to administrate the virtual infrastructure in compliance with business-aligned functions in a simple and yet most effective manner.

Features & Functions

- View selected Fujitsu Hosts and Blades from within your VI Client
 - Script management and scheduling wizard
 - Native vCenter scheduled task functions
 - Seamless integration in VMware management
 - "Inherited" authentication and permissions
 - Cmdlets for SSH control and graphical output
 - Enhancement of VI/vSphere Client and vCenter functionality
 - Activity log
 - Includes icomasoft® scripts for the most common VMware management tasks, such as "setup and delete virtual switches and port groups", "change of root passwords on ESX hosts", "restart of host-based vCenter agents", "disconnect removable medias", "View/Search ESX Log files", various statistics and Top10 views, and many more
 - Extended graphical reporting with filtering, sorting, grouping, conditional formatting and export to Excel and CSV files.
- User Benefits

User Benefits

- Automated recognition of Fujitsu Host and Blades
- icomasoft® VI PowerScripter provides users with an unprecedented ease-of-use and automation of administrative tasks around VMware vCenter, ESX and ESXi.
- Up to 2 hours per day time-savings due to scheduling and automation of admin tasks
- High security level, due to "inherited" authentications and permissions (no separate login required)
- Integrated wizard helps managing scripts and schedules
- Foundation for accurate billing and compliance
- Simplified monitoring, reporting and analysis
- Integration of custom functions into VMware's standard management console
- Standard functions for most common management tasks
- Integration of existing scripts
- Mass and individual configuration with one script
- No additional management software required
- Custom scripts based upon your specification can be ordered from icomasoft® (sales@icomasoft.com)

Licensing

Perpetual licenses, per seat (per administrator)
