

Product launch of icomasoft's first software: icomasoft® VI PowerScripter

icomasoft ag launches its first software product "icomasoft VI PowerScripter" (beta version), an extremely powerful tool that drastically reduces the time and efforts for administrative tasks and workflows in virtual environments.

Walchwil/Switzerland – September 1, 2008. Icomsoft AG, a Swiss pioneer of agent-less software solutions that provide unprecedented transparency across virtual and physical IT infrastructure in heterogeneous datacenters, today announced general availability of its first product „**icomasoft ® VI PowerScripter**“.

icomasoft® VI PowerScripter (Beta 1) is the first VMware VI Client plug-in with seamless integration of PowerShell scripts into VMware Virtual Infrastructure 3.5 objects. This plug-in contains some scripts for standard admin tasks. Users can, however, create dozens of self-made scripts and access them through a dynamic context menu in VI Client. Additionally, at general availability of version 1.0, icomasoft® will sell a repository of a large number of standard scripts and workflows.

icomasoft® VI PowerScripter is an extremely flexible and powerful software delivering the foundation for a very efficient administration of virtual infrastructures. Moreover, users can benefit from customizable functions that are adaptable to corporate requirements and regulations.

Functionality

- Execution of PowerShell scripts through a dynamic context menu (usually no customization required)
- Use of VM or host-based PowerShell scripts
- Execution of scripts on single and multiple objects(Cluster, Datacenter)
- Choice between debug and silent mode
- Use of local scripts or network scripts
- User-defined and almost unlimited extension of VI Client and VirtualCenter functionality
- Execution of all PowerShell scripts with correct VirtualCenter permissions
- Logging of all script executions
- Use of standard icomasoft® scripts

Users benefit from an extremely intuitive and simplified method for creating and executing hundreds or thousands of individual admin tasks and workflows.

User's Benefits

- Integration of self-created scripts into VMware's standard management software
- Reduction of required resources for administrative tasks
- Easy monitoring and analysis of the virtual infrastructure behavior

- Sustained permissions structure during the execution of PowerShell scripts
- Increased security as no users profiles and passwords are being used
- Mass configuration and individual configuration can be executed with one single script
- Almost unlimited extension of the basic functionality of VMware infrastructures and free ESXi
- Use of existing scripts with minimal or no customization

icomasoft® VI PowerScripter (Beta 1) is available for free download at www.icomasoft.com/downloads

Users are welcome to visit our forum and share ideas, suggestions for improvement and scripts with icomasoft's users' community.
